Keep abreast of industry trends, competition, and market developments.

Prepare and submit sales contracts and orders for processing.

WEB DEVELOPMENT SKILLS

- Proficient in HTML, CSS, and JavaScript
- Familiarity with front-end frameworks such as React.js and Vue.js
- Basic knowledge of back-end technologies like Node.js and MySQL
- Experience with version control using Git and GitHub
- Understanding of responsive web design principles
- Strong problem-solving and analytical skills
- Ability to work effectively in a team environment.
- Excellent communication skills

Projects

Thumbnail Gallery

This project implements a simple thumbnail gallery with JavaScript, It Allows users to click on thumbnail images to view them in the main image area with a fading effect, enhancing user interaction and visual appeal. JavaScript Retrieves elements from the HTML document.

Sets initial opacity values for thumbnail images.

Adds click event listeners to thumbnail images.

Updates the main image source and applies a fading effect when a thumbnail is clicked.

Adjusts the opacity of the clicked thumbnail.

Profile Card

Designed and implemented a responsive profile card using HTML and CSS. Styled various elements, including images, text, buttons, and analytics data. Applied Flexbox for layout and media queries for responsiveness. Imported Google Fonts for typography enhancements. Developed skills in web design, CSS styling, layout techniques, and font integration.

Recipe Book App

I designed a neat layout using HTML to display various recipes, complete with enticing images, catchy titles, and lists of ingredients to make them easy to follow. To make the app visually appealing, I applied a stylish design using CSS, ensuring that everything looked great and was easy to read. I made sure the app worked seamlessly on any device by incorporating responsive design techniques with media queries, so users could enjoy it whether they were on a phone, tablet, or computer. To make the user experience even better, I added a feature using JavaScript that allows users to click on recipe images to view them in a larger format and easily navigate through them. I created a function called `getRecipes()` that asks an online recipe service for recipe information. Using `fetch`, I sent a request to their website and got back the recipe details. Then, I used `init()` to start things off. It calls `getRecipes()` to get the recipes and then displays them. If something goes wrong, it handles the issue so the app keeps running.
